

Home Sweet Comfortable Home

Honeywellheatsavings.com Fast Energy Savings Facts

Did You Know?

- On September 13, 1991, President George Bush proclaimed **October as Energy Awareness Month**. Since then, the U.S. Department of Energy has been conducting energy awareness campaigns that promote the wise and efficient use of our nation's energy.
- The average annual cost to heat a house* at 70 degrees is \$2,200. It makes good sense to heat only the rooms in which you spend the most time, rather than the whole house. (Based on an average 1,500 square foot house)
- Heating and cooling account for about 56% of the energy use in a typical U.S. home, making it the largest energy expense for most homes. (source: US Department of Energy)
- According to the Alliance to Save Energy organization, lowering your thermostat one degree saves you 4 percent in heating costs.
- If every household in the U.S. turned their thermostat down just 2 degrees, each home could save 8 percent in heating costs. America would save more than \$11.3 billion each year.
- California is the leader in portable heater purchases. Despite its sunny reputation, Californians know the energy and money saving advantages of a portable heater. Are you saving money when your sun suit is put on hold?

How can you Save Energy This Winter?

Check out www.honeywellheatsavings.com to see how much you can save on your heating bills. Whether you heat your home with oil, natural gas or electricity, you can do your part in helping to conserve energy by simply turning down your thermostat and turning up your portable heater. At honeywellheatsavings.com, you can see how much you can save by making this simple switch.

Additional Energy-Saving Resources:

In addition to Honeywell portable heaters, there are a number of energy-savings steps you can take to save money and the environment. Feel free to visit any of the below links for additional information.

More Energy Savings Tips Offered by the Federal Trade Commission:

- Wrap your hot water heater in an insulating jacket.
- Install drapes or some other covering on windows, and seal holes around plumbing and heating pipes.
- Install a programmable thermostat that will automatically lower nighttime temperatures.
- Close your foundation vents in the winter if there's a crawl space under your home.
- Close the doors to rooms that you don't use.
- Install ceiling fans. The air circulation promotes heating efficiency in the winter.
